    return {k: i for i, k inenumerate(data[variable].unique())}
# Returns the column after mapping with dictionary definteger_encode(data,variable,
    ordinal_mapping): data[variable]=data[variable].map(ordinal_mapping)
    for variable in ['Surname','Geography','Gender']:
    mappings=find_category_mappings(datal,variable)
    integer_encode(datal, variable, mappings) datal.head()
```

#### Out [17]: Surname Geography Gender

0	0	0	0
1	1	1	0
2	2	0	0
3	3	0	0
4	4	1	0

## Split the data into dependent and independent variables.

Dependent Variable: A dependent variable is a variable whose value depends on another variable.

Independent Variable : An Independent variable is a variable whose value never depends on another variable.

```
In [6]: print("TheMinimumvalueofDataset:\n",data1.min(numeric_only=True)) print("\n")
    print("TheMaximumvalueofDataset:\n",data1.max(numeric_only=True)) print("\n")
    print("TheMeanvalueofDataset:\n",data1.mean(numeric_only=True)) print("\n")

    print(data1.count(0))
    print(data1.shape) print(data1.size)
```

```
The Minimum value ofDataset:
   Series([], dtype:float64)
```

```
Out [7]:

Geography Gender

France Female

Spain Female

France Female

France Female

France Female

Spain Female
```

#### Scale the independent variables

```
Out[8]: Index(['Geography', 'Gender'], dtype='object') In[12]:
          from sklearn.preprocessingimportscale x=scale(x)
In[16]:
          Х
Out[16]:
                Geography Gender
             0
                   France Female
                    Spain Female
             2
                   France Female
                   France Female
                    Spain Female
             4
          9995
                   France
                             Male
          9996
                   France
                             Male
          9997
                   France Female
          9998
                  Germany

#### Split the data into training and testing

The train-test split is used to estimate the performance of machine learning algorithms that are applicable for prediction-based Algorithms/Applications. By default, the Test set is split into 30 % of actual data and the training set is split into 70% of the actual data.

	Geography	Gender
7389	Spain	Female
9275	Germany	Male
2995	France	Female
5316	Spain	Male
356	Spain	Female

```
Out[21]: ((8000, 2), (8000,), (2000, 2), (2000,))
```
